

## **Cheytec Telecommunications Heightens Event-Goer Experience at The Blumenthal**

**Charlotte, North Carolina: January 2016** — The Blumenthal Performing Arts Center - the home to the Charlotte Symphony, the Charlotte Ballet, and the stopping point for all things performing arts in Charlotte and the Carolinas - now has world-class wireless service.

Cheytec Telecommunications (Cheytec) deployed a new in-venue wireless distributed antenna system (DAS) throughout the 130 North Tyron Street complex.

“We are very pleased to be able to get a system into The Blumenthal,” said Michael B. Wright, Vice President of Sales and Business Development at Cheytec. “The increased coverage and capacity will certainly benefit the patrons of The Blumenthal as well as provide an overall heightened event-goer experience.”

The new system provides additional wireless coverage and capacity throughout the nearly 200,000 square foot three-story facility.

“Given that The Blumenthal is a low-lying building amongst the tall downtown Charlotte skyline, coupled with the fact that wireless-user population fluctuates greatly during a show or other event,” said Mr. Wright, “a flexible in-building system capable of providing excellent cellular service within the theaters was just the right ticket.”

### **About Cheytec**

Cheytec Telecommunications is an Ericsson portfolio company headquartered in Edison, New Jersey. Cheytec deploys, owns, and operates wireless telecommunication systems, including distributed antenna systems, small cell, and C-RAN solutions, for complete wireless coverage inside office buildings, hotels, campuses, sporting venues, and other properties in high-traffic areas. Through its suite of turnkey real estate, finance, and technology solutions and services, Cheytec is leading the way to the next generation of wireless communications. We’re enabling wireless service providers and operators to equip qualifying properties with the fastest cellular data speeds available and allowing state-of-the-art systems to be designed, financed, installed and operated where they are needed most—where the customers and users are. **For more information about our wireless coverage solutions, visit us at [www.cheytec.com](http://www.cheytec.com).**
