

Cheytec's EDISON Real Estate Database Upgraded and Now Web-Accessible

Edison, New Jersey: January 2016 — Cheytec Telecommunications (Cheytec) is pleased to announce the latest release of EDISON, a proprietary and exclusive web-accessible database focused on providing wireless operators critical real estate information specific to designing and deploying in-building wireless systems.

EDISON has been constructed based on Cheytec's nationwide real estate relationships. It is highly searchable based on end-user criteria such as city, zip code, latitude/longitude, and service ring radius. Additional filters are based on building type and genre (office, industrial, hospitality, retail, health care etc.). Search results are viewable via detailed on-line maps and downloadable for use in other mapping and planning tool platforms.

"This version of EDISON is highly accessible and very user-friendly," said Ed Myers, Regional Vice President at Cheytec. "EDISON's constantly growing inventory of assets from our friendly real estate partners make it an ideal in-building planning tool for wireless operators and other customers."

The database has thousands of assets available for viewing and analysis. All of the buildings and facilities accessible within EDISON are owned by companies who have partnered with Cheytec to assist in both marketing and the development of in-building wireless systems for their assets.

EDISON provides the type of data about real estate that wireless operators find most useful when planning deployments such as building type, number of floors, rentable square feet, occupancy data, and nearness to existing macro cell sites and towers.

"We view EDISON as an ever-evolving tool," said Myers. "Soon it will include other types of data such as available in-building fiber carriers and types of building materials. Really anything of value that we can provide to help the carriers prioritize system and bring increased coverage and capacity to in-building customers."

About Cheytec

Thanks to our powerful blend of turnkey real estate, finance, and technology solutions, Cheytec is leading the way to the next generation of wireless communication. We're enabling wireless service providers and operators to equip qualifying properties with the fastest cellular data speeds available and allowing state-of-the-art systems to be designed, financed, installed and operated where they are needed most—where the customers and users are. **For more information on about Cheytec Telecommunications please see www.cheytec.com or call 732-476-6804**
